INTERNATIONAL ASSOCIATION OF ELECTRICAL INSPECTORS

"For Uniform Code Interpretation"

Eastern Section

May 16, 2006

This is a statement of support to local authorities having jurisdiction (AHJ) from the Empire Chapter of the International Association of Electrical Inspectors (IAEI) for quality electrical installations and inspections. The Empire Chapter IAEI, a respected and accessible resource, can assist the AHJ in implementing the New York State Building Code by providing education related to the use of the National Electrical Code and associated standards.

The International Association of Electrical Inspectors and its Empire Chapter support certification of electrical inspectors. The Empire Chapter IAEI promotes safe and proper electrical installation with integrity employing the experience of our members. See our Chapter's Web site at <http://empire.iaei.org> for our activities and the IAEI's Web site for [certification programs](#). Below is a list of a few recent seminars offered in our Chapter:

- IAEI Analysis of 2005 NEC Changes
- IAEI Soares Grounding and Bonding
- Voltage Drop and NEC Article 220 Calculations
- Safe Standby Generator Connections
- Motors and Motor Controllers and the NEC
- Arc Flash Hazards and Protection and the NEC
- Hazardous Locations and the NEC
- High Voltage Codes and Standards for Installation, Inspection, Safety, and Maintenance

The Empire Chapter IAEI supports the [national position statement](#) on the value of quality electrical inspections. One means of support is by disseminating knowledge of new National Electrical Code (NEC) requirements when updated and communicating Code changes and applications in a quick, effective manner. And so, the Chapter carries forth the IAEI's goal to educate electrical installers, inspectors, sales people, and designers for safe wiring practices and strives to maintain a balance of interests among its membership.

The International Association of Electrical Inspectors' membership includes electrical inspectors, installers, engineers and designers, or any persons or organizations in the electrical industry who wish to focus on safety. The association plays a cohesive role among testing agencies, standards organizations, manufacturers, distributors, and contractors. The IAEI has a broad membership base, but remains the voice of the electrical inspectors who have the responsibility of ensuring the practical safeguarding of persons and property from hazards arising from the use of electricity.

Let us assist your Municipality's AHJ administration of a local qualification and control program for electrical installations and inspections according to the NYS Building Code, 19 NYCRR Part 1203. Please contact our Chapter President or our Chapter Education Chair listed below.

Respectfully,

The Empire Chapter of the International Association of Electrical Inspectors
